SUMMARY

Master's student in Data Science with 4 years' experience as a Cloud Engineer and Implementation Consultant at ArisGlobal, cutting deployment time and project go-live cost by 15%. Strong hands-on foundation in SQL and Power BI — writing queries to extract, join and aggregate data from relational databases, and building dashboards and data models that turn raw operational data into clear, actionable insights. Experienced partnering with technical and non-technical stakeholders across Finance and Operations to document data logic and surface process inefficiencies. Now looking to apply that analytical rigour to operational reporting and business intelligence in e-Mobility.

SKILLS

Analytics & Reporting — SQL, Power BI, Tableau, MS Office Suite(Excel — pivot tables, lookups, scenario modeling; PowerPoint; Word)

Programming & Databases — Python(Pandas, NumPy), SQL, PL/SQL, MySQL, PostgreSQL, REST APIs, Bash/Shell scripting

Machine Learning & AI — PyTorch, Scikit-learn, FAISS, Sentence Transformers, Streamlit, Ollama

Cloud & DevOps — AWS (EC2, RDS, Lambda, S3, VPC, IAM, ALB), Git, GitHub Actions, Datadog, Linux, Apache Tomcat

Tools — Jira, VS Code, Postman, SQL Developer

WORK EXPERIENCE

Associate Cloud Engineer

10/2021 – 09/2025 | Mysuru

ArisGlobal

- Improved system performance and data integrity by optimizing SQL queries and database structures — profiling slow queries, restructuring joins and indexes across relational databases, and automating log validation via a Linux shell script that flagged execution errors, saving 30–40 working hours and 3–5% of allocated project go-live cost per deployment.
- Built and managed GitHub Actions CI/CD pipelines to automate deployments — triggering releases on push, sourcing configuration files from S3, and executing JAR builds for seamless, repeatable rollouts; managed multiple concurrent project deployments, delivering high-quality solutions under tight deadlines.
- Leveraged AWS services — EC2, Lambda, S3, RDS, Secrets Manager, Systems Manager, CloudWatch, and Auto Scaling — including serverless architectures, to enhance system scalability, security, and performance across deployments and release upgrades.
- Designed and maintained AWS and Datadog monitoring dashboards used by engineering and delivery teams to track operational health — defining the metrics, surfacing recurring failure patterns, and cutting error resolution time by 20–30%.
- Implemented Auth0 as a newly adopted third-party identity provider for the project, configuring SSO and password less authentication across multiple customer tenants.
- Established the setup process for onboarding customers onto the new platform, defining a consistent, secure configuration standard for connections, credentials, and access policies.

PROJECTS

Retail Inventory Optimisation | PostgreSQL, SQL, REST API

- Built a live KPI dashboard ranking at-risk inventory by urgency across multiple stores and suppliers — writing the aggregation queries that join stock, supplier, and expiry data to surface expiry-driven risk that pure stock-level checks miss, and translating it into prioritized reorder decisions for store managers.
- Designed the underlying 7-table normalized PostgreSQL schema and reporting views, with server-side validation ensuring data integrity and consistent logic across multi-store, multi-supplier tracking.

Reducing repeated llm calls through caching

Python, FAISS, Sentence Transformers, Ollama

- Built a hybrid exact-match and semantic-similarity caching pipeline, then benchmarked it across similarity thresholds to quantify the cost–accuracy tradeoff — cutting redundant API calls by 91% and latency 11× while retaining 89.5% accuracy. Documented the threshold logic and results to make the tradeoff explicit for non-technical decision-makers.

Biodiversity Sound Monitor | PyTorch, Streamlit

Built an end-to-end pipeline classifying 206 bird species from field recordings (BirdCLEF 2026) using only weak, file-level labels. Diagnosed class imbalance as the failure mode of the baseline, then designed a custom CNN with Multiple-Instance-Learning pooling to localize calls without timestamp annotations — improving macro F1 from [X] to [Y]. Shipped as an interactive Streamlit dashboard for real-time inference.

Crop Recommendation

Developed and deployed a crop recommendation ML system (Python, scikit-learn, Streamlit) that benchmarks 4 classification models and serves live predictions via a web app, achieving 99.3% test accuracy with a Random Forest classifier.

EDUCATION

Master's in Data Science

University of Europe for Applied Sciences

09/2025 – Present | Potsdam

Bachelor's in Computer Science

Vidya Vikas Institute of Engineering

08/2017 – 10/2021 | India

CERTIFICATIONS AND HONORS

Value Champion Award

ArisGlobal

05/2025

Recognized for delivering the Roche project go-live with zero production issues.

Best Team for 2024-25

ArisGlobal

2025

Achieved the title in the ArisGlobal ELEVATE award for the successful implementation of four live projects within a brief timeframe.

Spot award

ArisGlobal

2022

Awarded for rapidly mastering core cloud technologies and contributing to the live production environment within a short onboarding period.
